

INFRARED GAS ANALYZER FOR STACK GAS

DATA SHEET

ZSJ

This analyzer consists of an infrared gas analyzer, an O₂ sensor and a gas sampling device. It is used for simultaneous and continuous measurement of the NO_x, SO₂, CO, CO₂ and O₂ components in the flue gas of various boilers, garbage incinerators, etc.

For CO and O₂ measurement specifications, the function for coping with the Japanese regulation on dioxin emission is incorporated.

FEATURES

- Gas concentrations of 5 components is measurable simultaneously and continuously
NO_x, SO₂, CO and CO₂ gas concentration measurements are integrated by infrared method, to which a zirconia or magnetic type O₂ sensor is added for O₂ measurement. Therefore, the gas concentrations of 5 components are simultaneously and continuously measurable.
- Zero drift does not occur as a principle thanks to high sensitive and reliable mass flow sensor is equipped and switching method is adopted.
- Maintenance can be performed from the front side, thus saving the installation space.
Unitized structure of the analyzing block and gas sampling module enables better maintenance.
- Provided with abundant functions including O₂ correction output, average value output, automatic calibration, CO peak count alarm, automatic range changeover, and alarms.
