

Developing a new technology that reduces power loss by 28% and results in space savings of 33%? Some call it ground-breaking. Some call it pure innovation.

At Fuji Electric, we call it Tuesday.

Fuji Electric's authentic Reverse Blocking IGBT has been used to develop the latest modules featuring Advanced T-Type Neutral Point Clamped (AT-NPC) 3-level circuit topology. The use of this patented technology means a system level reduction of power loss (28%) and volume (33%) compared to the conventional 2-level topology system for PV Inverters and UPS products.
