Supporting Society with
Energy and Environmental Technology

Fuji Electric Power Semiconductors contributing Energy Management in various fields

Fuji Electric provides Power Semiconductors enabling high-efficiency energy usage in various fields such as industrial machinery, automobile, railroad, social infrastructure, renewable energy, consumer electronics and information equipment in order to achieve low-carbon society.

Fuji Electric contributes to realization of safe and secure sustainable society through continuous technology innovation and product development of Power Semiconductors as key devices in Power Electronics technology.

The pictures on this page show examples of various applications which may use Fuji Electric Power Semiconductors, they aren't necessarily used in the products in these pictures.

Fuji Electric provides Power Semiconductors well suited for various applications. You will find more information on products for each application shown below at our Web site.

www.fujielectric.com/products/semiconductor/usage/

Inverters

Semiconductor products best suited for general-purpose inverters that carry out variable-speed operation of motors in products such as belt conveyors, fans and pumps

Medium-Voltage Inverters

Semiconductor products suitable for medium-voltage inverters that drive 3-phase AC 3k/6k/6.6kV high-voltage motors used in iron and steel plants, textile plants and paper mills

NC / Servos

Semiconductor products best suited to NC and servos that carry out speed control and positioning of machine tools, as well as robots that have multi-spindle control features used in assembly, welding and conveyance

Railroads

Semiconductor products suited for the power electronics of railroad cars such as the main motor drive and auxiliary power supply equipment of rolling stock

Wind Power Generation

Semiconductor products suitable for AC/DC converters that convert the AC power output from wind turbine generators to DC power, as well as for inverters that convert DC power to the AC power of commercial frequencies

Solar

Semiconductor products best suited for power conditioners that convert solar-panel generated DC power into AC power to enable the residential consumption, as well as to facilitate the recovery of the power to the power systems of power companies

Welding Machines

Semiconductor products suitable for switching circuits that generate resistance heat in welding machines to melt and integrate by adding heat or pressure to two or more metallic members

UPS

Semiconductor products ideal for the power conversion circuits of UPS (uninterruptible power supply) that prevent system shutdown during power outages and instantaneous power failures

Switching Power Supplies

Semiconductor products best suited for general-purpose switching power supplies used in a wide variety of applications such as equipment for general consumers and OA and communication devices

PC / Servers

Semiconductor products suitable for the power supplies of increasingly high-performance desktop PCs and servers, as well as of increasingly compact and lightweight notebook PCs

Flat-screen TVs

Semiconductor products ideal for the power supplies of TV sets that require low power consumption and large screens that are increasingly thinner and more lightweight

Automobiles

IGBT modules, power ICs, MOSFETs and pressure sensors as semiconductor products for automobiles developed with the theme "Car Electronics Solutions - Contributing to the Environment, Safety and Comfort"

IGBT Module

Fuji Electric has been developing IGBT modules designed to be used as switching elements for power converters of variable-speed drives for motors, uninterruptible power supplies, and more. IGBT has superior characteristics combining the high-speed switching performance of a power MOSFET with the high-voltage/high-current handling capabilities of a bipolar transistor.

Features of IGBT Module X Series

• Reduces power dissipation to contribute to energy saving

The IGBT and diode devices of Fuji electric's 7th-generation X series that constitute these modules have been made thinner and miniaturized, thereby optimizing the device structure. This has successfully reduced power dissipation in inverter operation compared with conventional products (Fuji Electric's 6th-generation V Series), contributing to energy saving and power cost reduction of the equipment on which the module is installed.

• Achieves equipment size reduction

A newly developed insulating substrate has been applied in order to improve the module's heat dissipation. Combined with the feature described above (reduced power dissipation) to suppress heat generation, an approximately 36%*1 reduction has been

achieved in comparison to the conventional module. In addition, the maximum temperature guaranteed in continuous operation has been increased from the conventional 150°C to 175°C, which allows the output current to be increased by up to 35%*2 while maintaining the size of the equipment on which the module is installed. This contributes to reducing the size and total cost of the equipment.

*1: Mounting area ratio with 1200 V 75A PIM models

*2: Value estimated from simulation results

• Contributes to improving equipment reliability

Newly developed structures and materials of the module have realized to increase its stability and durability in high-temperature operation. This contributes to improving the stability and reliability of the equipment on which the module is installed.

Features of IGBT Module V Series

• A compact design allows for greater power output

- High performance 6th-generation V series IGBT/FWD chipset
- $T_{vj(max.)}=175^{\circ}\text{C}$, $T_{vj(op)}=150^{\circ}\text{C}$

• Environmentally friendly modules

- Easy assemblage, solder free options
- RoHS compliant (Some parts are Non RoHS.)

• Turn-on switching characteristics

- Improved noise-loss trade-off
- Reduced turn-on dv/dt , excellent turn-on dic/dt

• Turn-off switching characteristic

- Soft switching behavior, turn-off oscillation free

Note 1: PrimePACK™ is registered trademark of Infineon Technologies AG, Germany.

Note 2: The products with suffix '-54' on this page are labeled to specify the rank of $V_{CE(sat)}$ and V_f .

Note 3: The products with 'EA' on this page have optimized FWD for the application causing heavy load through FWD.

The optimized FWD reduces V_f and thermal resistance.

Note 4: "-80": Pre-Applied Thermal-Interface-Material for "-54"

IGBT Module 3-level < V series >

T/I-type NPC 3-level Circuits 600V, 1200V, 1700V class

■ Features

- Applicable to T/I-type NPC 3-level circuit, for high power conversion efficiency.
- There are 1-leg or 3-leg (3 phase) circuits in one package and it is easier to make external wiring of module.
- Lower surge voltage by smaller internal package stray inductance.
- Lower power loss can be achieved by using RB-IGBT*³ as for T-type AC-SW device.
- Lowest power loss can be achieved by using 6th Gen. IGBT and FWD as for Main-SW device.

IGBT Module IPM < V series >

■ IPM (Intelligent Power Module) 600V, 1200V class

Built-in protection functions

P-side fault status output (Alarm)
 N-side fault status output (Alarm)
 Under voltage protection (self shutdown)
 Over current protection (self shutdown)
 Overheating protection (self shutdown)

Discrete IGBT High Speed W series 650V,1200V class

Features

- IGBT in Trench-gate structure and Field-stop technology
- Low $V_{CE(sat)}$ and low switching Loss
- High switching frequency (to 100kHz)

IGBT in field-stop technology and trench-gate structure with Ultra fast FWD
650V,1200V class

Discrete IGBT V/High Speed V series 600V, 1200V class

Features

- IGBT in Trench-gate structure and Field-stop technology
- Low $V_{CE(sat)}$ and low switching Loss
(High Speed V series)
- Short circuit withstand time; $t_{sc}=10\mu s$ (V series)

IGBT in field-stop technology and trench-gate structure with Ultra fast FWD

Discrete RB-IGBT

Features

- Reverse blocking character is realized for 1 chip by Fuji's original technology.
- High efficiency by applying to T-type 3 level inverter circuit.

IGBT Module for Electric Vehicle and Hybrid Electric Vehicle

IGBT IPM for Electric Vehicle and Hybrid Electric Vehicle

Features

- Including circuit board which has IGBT drive and protection function
- Optical isolated
(signal input, IGBT's temperature monitor, alarm output)
- Detection and protection
(short-circuit, over-temperature, under-voltage)
- Lead Free Package

Characteristics

($T_{vj}=25^{\circ}\text{C}$)

Device type	V_{CES} Volts	$I_{C(Cont)}$ Amps.	$V_{CE(sat)}$ typ. Volts	V_F typ. Volts	Package	Net mass Grams
2MBP600UN120V	1200	600	2.00	2.20	P401	680

IGBT Module for Electric Vehicle and Hybrid Electric Vehicle

Features

- 7th Generation "RC-IGBT" 750V-IGBT
- Direct liquid Cooling AL Water jacket
- High power density, small and light weight package
- High reliability : T_{vjmax} 175°C guaranteed
- RoHS compliant

Characteristics

$V_{CE(sat)}$: at $T_{vj}=25^{\circ}\text{C}$, Chip

Device type	V_{CES} Volts	$I_{C(Cont)}$ Amps.	$I_{C(Peak)}$ Amps.	$V_{CE(sat)}$ typ. Volts	V_F typ. Volts	Package	Net mass Grams

SiC Devices

SiC devices have excellent characteristics that realize high blocking voltage, low power dissipation, high-frequency operation and high-temperature operation.

Power semiconductors that make use of SiC achieve significant reduction in energy consumption, and can be used to develop smaller and lighter products.

IGBT Hybrid Modules with SiC-SBD X series / V series

■ Features

- High performance chips
 - X series / V series IGBT for low loss operation
 - SiC-SBD for low loss operation
- The same package lineup as the conventional Si-IGBT modules

■ Part numbers

SiC Schottky-Barrier Diodes (SBD)

■ Features

- High speed switching
 - High-frequency operation,miniaturization,weight saving
- Low- V_F
- Low- I_R
 - $T_{vj}=175^{\circ}\text{C}$ Guaranteed, High-temperature operation, Low-Loss, High efficiency
- High avalanche capability

Integrated Circuits

Fuji Electric offers a lineup of AC/DC and DC/DC power supply control ICs that support a variety of power circuits. These highly efficient, low-noise products with low standby power consumption are compatible with environmental regulations. Furthermore, many protection functions are built into the ICs themselves, allowing for smaller power circuits.

Features of Power Supply control ICs

Green Mode PWM-ICs

■ Features

- Built-in 500/650V withstand voltage start up circuit
- Green mode functions (Intermittent Switching/Linerary reduced switching frequency)
- Protect functions (Over voltage/Brown out/2 stage Over power)
- Low EMI noise

Green Mode Quasi-resonant ICs

■ Features

- Built-in 500V withstand voltage start up circuit
- Green mode functions (Intermittent Switching/Linerary reduced switching frequency)
- Protect functions (Over voltage/Over load etc.)

Power Factor Correction ICs

■ Features

- Wide electric power range(From 75W to 1kW)
- Power factor ≥ 0.99
- Protect functions (FB Pin open short/Over voltage etc.)

Current Resonant ICs

■ Features

- Realize 1 convertor circuit structure at world wide input power
- Built-in High side driver
- Preventing capacitive region operation
- Protect functions
(Over current/Over voltage/Over load/Over heat/Brown out)
- Green mode function (Intermittent switching)

High and Low side driver IC

■ Features

- High negative transient voltage on VS terminal
- Wide range supply voltage up to 30V (FA5650/5651)
- 3.3V logic compatible
- Built-in under voltage lockout
- Allowable offset supply voltage transient dV_s/dt up to 50kV/us
- High speed response: Turn on/off delay time 125ns (Typ) (FA5650/5651)

Power MOSFETs

Fuji Electric has a lineup of power MOSFETs ranging from medium to high-voltage types with features such as low power loss, low noise, and low on-resistance. The "Super J-MOS[®]" Series uses superjunction technology, and was developed primarily for models with a withstand voltage of 600 V.

MOSFET Super J MOS[®] S2 Series

■ Concept

Superjunction technology has much improved trade-off characteristics between On-resistance and Breakdown voltage. Super J MOS[®] S2 has the same turn-off loss and turn-off dv/dt capabilities at conventional Super J MOS[®] S1. As a result, It contributes to high efficiency and miniaturization of power supply.

■ Applications

PFC or PWM converter for Server, PC, PCS, UPS, LCD-TV, Lighting and Standard power supply

■ Features & Benefit of Super J MOS[®] S2 series

Feature	Benefit
Low on-state resistance Low switching loss	➔ High efficiency High power density
Low gate charge (Q_G) Low energy stored in output capacitance (E_{oss})	➔ High efficiency at low load
Easy to use (more controllable dv/dt by R_G and Low V_{ds} surge)	➔ Easy to design
100% avalanche tested	➔ High reliability

■ Benefit (Efficiency) of Super J MOS[®] S2 series

Super J MOS[®] is registered trademarks of Fuji Electric.

■ Features of Super J MOS[®] S2 series

- Low $R_{DS(on)}$: A 25% lower than our conventional MOSFET (Super J MOS[®] S1)
- Due to low $R_{DS(on)}$, Selectable smaller package
ex) 600V/0.07Ω/TO-3P → 600V/0.07Ω/TO-220F

- Low Q_G 30% lower than our conventional MOSFET (Super J MOS[®] S1)
- Low E_{OSS} 30% lower than our conventional MOSFET (Super J MOS[®] S1)

■ Features of Super J MOS[®] S2FD series (Built-in FRED type)

- t_{rr} of S2FD is 50% faster than S2
- High diode recovery ruggedness (High $-di_{DR}/dt$ ruggedness)
- Guaranteed avalanche robustness

■ Applications

For resonant switching topologies in applications like UPS, Server, Telecom, LED lighting, Power conditioner system and Power supply.

Conditions : $V_{DS}=400V$, $I_{DR}=39.4A$, $-di_{DR}/dt=100A/us$, $T_{ch}=25^\circ C$

Built-in diode recovery wave form

Features of SuperFAP-E³, E^{3S} Series

■ Concept

The second generation Quasi-Planer Junction technology copes with both low loss/noise and usability.
And this technology lets us achieve high performance for power supply's circuit design.

■ Features

- Coping with both low loss and low noise
- Low $R_{DS(on)}$
- High controllability of gate resistance during switching
- Low V_{GS} ringing waveform during switching
- Narrow band of the gate threshold voltage ($3.0 \pm 0.5V$)
- High avalanche durability

Concept

Features of SuperFAP-G Series

The Quasi-Planer Junction technology achieve low $R_{DS(on)}$ and low switching loss (low Q_{GD}).

■ Features

- Low turn off loss 75% lower than our conventional type
- Low Gate charge 60% lower than our conventional type
- High avalanche durability
- Due to low $R_{DS(on)}$, Selectable smaller package
ex) 500V/0.4 Ω /TO-3P $\rightarrow$ 500V/0.38 Ω /TO-220

Super J MOS[®] is registered trademarks of Fuji Electric.

The Super J MOS[®] series products satisfies the quality assurance level of general consumer use.

If you intend to use the products for equipment requiring higher reliability, such as equipment for automobiles and medical equipment, please contact Fuji Electric.
Do not use the products for equipment requiring strict reliability such as aerospace equipment.

The Trench Power MOSFET series products satisfies the quality assurance level of general consumer use.

If you intend to use the products for equipment requiring higher reliability, such as equipment for automobiles and medical equipment, please contact Fuji Electric.

Do not use the products for equipment requiring strict reliability such as aerospace equipment.

Rectifier Diodes

Fuji Electric's rectifier diodes have features such as low V_F characteristics and low I_R , and are compatible with PFC circuits of power supplies and secondary-side rectification circuits.

Features of SBD, LLD

Ultra Low-IR SBD (Schottky-Barrier Diode)

■ Features

- Guaranteed $T_{vj}=175^{\circ}\text{C}$
- V_F is same level and I_R is reduced by less than 1/10.

LLD (Low Loss Diode) Super LLD series for PFC circuit

■ Features

Super LLD-3 for CCM-PFC

- Realize acceleration and low V_F compared with existing model.

Super LLD-2 for CRM-PFC

- Achieved low power loss by low V_F
- Achieved low noise by soft recovery

Pressure Sensors

Fuji Electric's pressure sensors combine piezo resistance, adjustment circuits, and EMC protection on single chip and contribute to reduction of system size. They operate in wide pressure range and are applicable to various uses.

Features of Pressure Sensors

- Absolute pressure measurement
- High accuracy with digital trimming
- Wide pressure range, full scale of 100kPa to 300kPa
- Provided with overvoltage protection circuit, EMC filter, and surge protective device in the sensor chip
- Surge protection conforms to ISO7637-level 3 (2011) for automotive components
- Diagnostic self-detecting function in the event of a wire opened among Vcc, Vout and GND terminals
- High reliability ensured by EPROM bit redundancy

Products

- Order unit is the number in “Min. quantity per order” or its integral multiplication.
- This table covers single or reel package items (Except for taping items).
- Order unit of taping package is different for each specification.
Please contact us for more detail.

Global semiconductor website

We will continue to keep our global semiconductor website updated and fulfilled with new information on our semiconductor products including new products release, search function, data sheets, and the related exhibition for our customers all over the world.
We hope it will be of much use to our customers. Thank you.

English: www.fujielectric.com/products/semiconductor/

Chinese: www.fujielectric.com/products/semiconductor/cn/

We would like to thank you for your continued patronage and further support for our semiconductor products.

WARNING

1. This Catalog contains the product specifications, characteristics, data, materials, and structures as of March 2018.
The contents are subject to change without notice for specification changes or other reasons. When using a product listed in this Catalog, be sure to obtain the latest specifications.
2. All applications described in this Catalog exemplify the use of Fuji's products for your reference only. No right or license, either express or implied, under any patent, copyright, trade secret or other intellectual property right owned by Fuji Electric Co., Ltd. is (or shall be deemed) granted. Fuji Electric Co., Ltd. makes no representation or warranty, whether express or implied, relating to the infringement or alleged infringement of other's intellectual property rights which may arise from the use of the applications described herein.
3. Although Fuji Electric Co., Ltd. is enhancing product quality and reliability, a small percentage of semiconductor products may become faulty. When using Fuji Electric semiconductor products in your equipment, you are requested to take adequate safety measures to prevent the equipment from causing a physical injury, fire, or other problem if any of the products become faulty. It is recommended to make your design fail-safe, flame retardant, and free of malfunction.
4. The products introduced in this Catalog are intended for use in the following electronic and electrical equipment which has normal reliability requirements.
 - Computers • OA equipment • Communications equipment (terminal devices) • Measurement equipment
 - Machine tools • Audiovisual equipment • Electrical home appliances • Personal equipment • Industrial robots etc.
5. If you need to use a product in this Catalog for equipment requiring higher reliability than normal, such as for the equipment listed below, it is imperative to contact Fuji Electric Co., Ltd. to obtain prior approval. When using these products for such equipment, take adequate measures such as a backup system to prevent the equipment from malfunctioning even if a Fuji's product incorporated in the equipment becomes faulty.
 - Transportation equipment (mounted on cars and ships) • Trunk communications equipment
 - Traffic-signal control equipment • Gas leakage detectors with an auto-shut-off feature
 - Emergency equipment for responding to disasters and anti-burglary devices • Safety devices
 - Medical equipment
6. Do not use products in this Catalog for the equipment requiring strict reliability such as the following and equivalents to strategic equipment (without limitation).
 - Space equipment • Aeronautic equipment • Nuclear control equipment
 - Submarine repeater equipment
7. Copyright ©1996-2018 by Fuji Electric Co., Ltd. All rights reserved.
No part of this Catalog may be reproduced in any form or by any means without the express permission of Fuji Electric Co., Ltd.
8. If you have any question about any portion in this Catalog, ask Fuji Electric Co., Ltd. or its sales agents before using the product.
Neither Fuji Electric Co., Ltd. nor its agents shall be liable for any injury caused by any use of the products not in accordance with instructions set forth herein.
