Fuji Fun Facts

Learn how to keep your system clean!

Dirt, dust, sawdust, and metal filings are just some of the pollutants that technicians see in UPSs, even when installed in seemingly clean environments. At least once a year, make sure your UPS gets cleaned including a good vacuuming with a non-conductive hose and attachments. Never use a blower or compressed air! Always perform cleaning work on equipment that is offline, and de-energized and with the proper personal protective equipment (PPE) such as goggles, gloves, aprons, and respirators as necessary.

Uninterruptible Power Supply

The cost of downtime can be catastrophic to financial institutions, data companies, hospitals and other facilities—not to mention the customers they serve. Fuji Electric’s high-efficiency UPS Systems provide our customers with a lower total cost of ownership and the peace of mind they need.
