

Engineering Services for Power Plants

Our Engineering and Procurement Services for Plant Improvements provide power plant operations and maintenance with the expertise, precision, and reliability needed to modernize and optimize their facilities. With extensive experience in Combined Cycle, Coal, and Geothermal power systems, we deliver on-time, on-budget equipment and component replacements while coordinating seamless upgrades across mechanical, electrical, and control systems. Our team brings full-service engineering support, proven project management, and a track record of successful heat rate improvements. In close collaboration with Reliable Turbine Services (RTS), we offer specialized capabilities for steam turbine and generator repairs and overhauls. Backed by strong client satisfaction and consistent delivery on commitments, we are the trusted partner for power plant optimization and long-term performance improvements.

CAPABILITIES

- Mechanical, Electrical and I&C Engineering and Design
- Detailed Specifications and Procurement Support
- Multi-Discipline Detailed Drawing Development and Interface
- Schedule Support in Primavera or Other Software Platforms

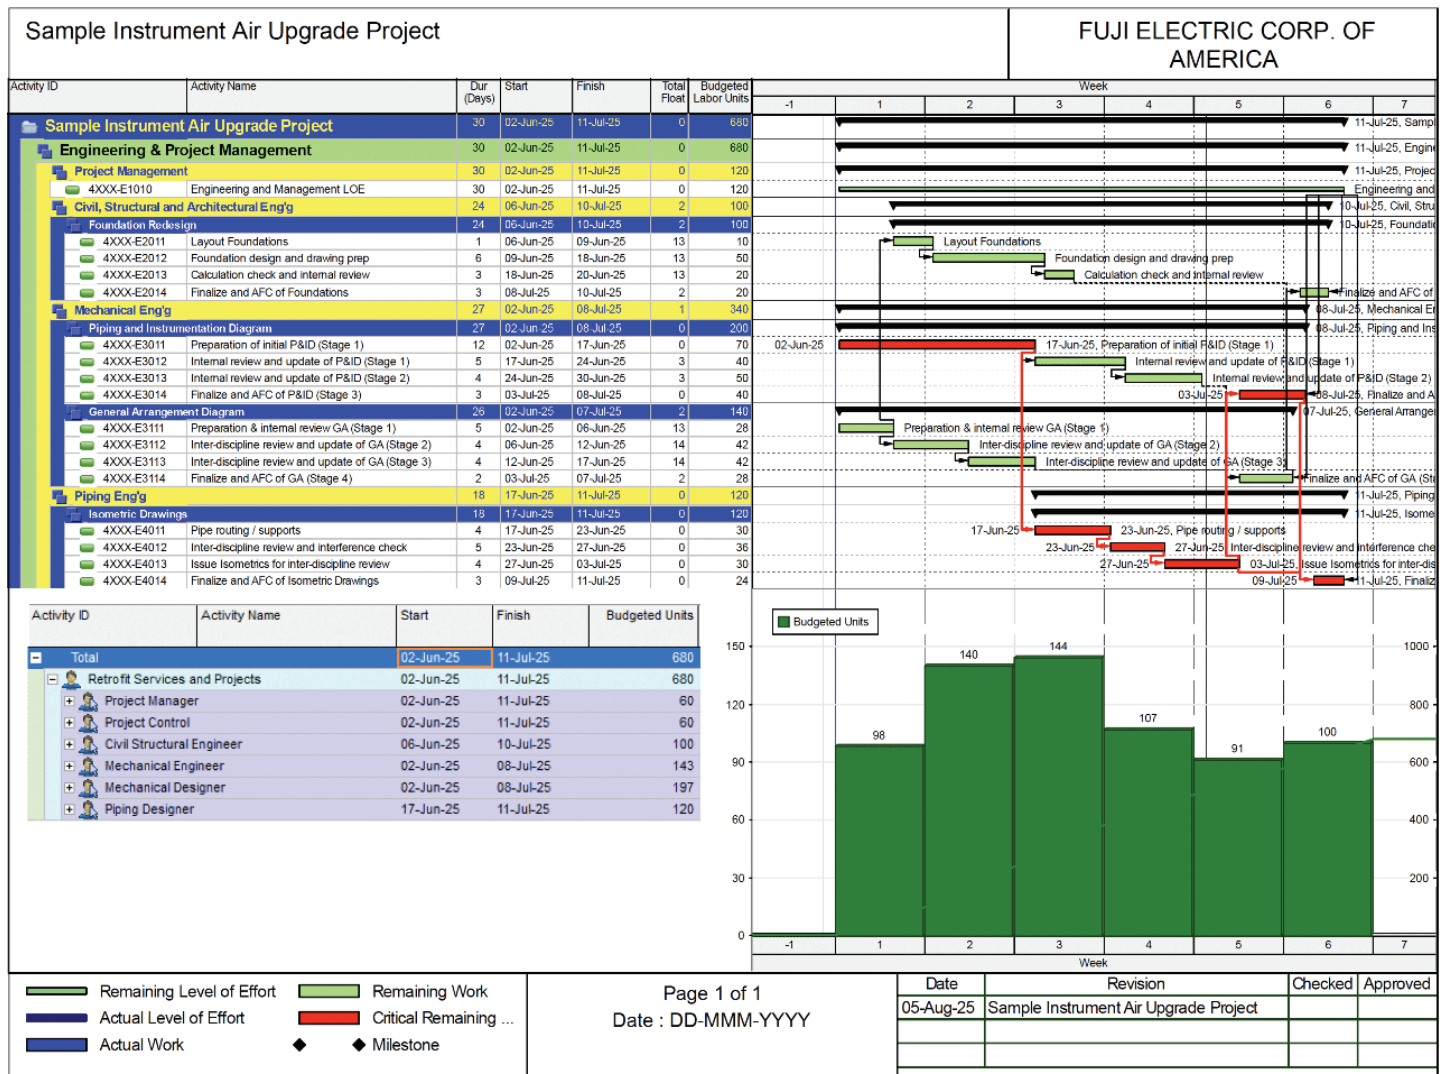

EXTENSIVE EXPERIENCE

- Project Management
- Mechanical System and Equipment Design
- Electrical System and Equipment Design
- Plant Optimization: Successful Heat Rate Improvements

FUJI ELECTRIC EXPERIENCE

- On Time and on Budget Equipment or Component Replacements
- Coordinated Mechanical, Electrical and Control System Upgrades
- Full Service Engineering Support
